Project Demo Planning

Date	28 June 2026
Team ID	XXXXXX
Project Name	Rising Waters
Maximum Marks	1 Mark

Project Demo Planning:

A well-structured demo planensures that the team presents the project effectively, covering all key aspects in a clear and organized manner. This document outlines the plan for demonstrating the project, including the flow ofthe demo, key features to highlight, and responsibilities of each team member.

S.No	***Demo Section***	***Description***	***Duration (mins)***	***Responsible Member***
1	***Introduction & Project Overview***	Brief welcome, team introductions, and overview of the Rising Waters project — problem statement, objectives, and scope of the ML flood prediction system.	***3 min***	Ameena Shaik
2	***Dataset & Preprocessing***	Walkthrough of the historical weather dataset (annual rainfall, cloud visibility, seasonal patterns), data cleaning, feature engineering, and train/test split strategy.	***4 min***	Chetan Reddy Sannapareddy
3	***ML Model Training & Comparison***	Live demonstration of training Decision Tree, Random Forest, KNN, and XGBoost classifiers. Accuracy metrics, confusion matrices, and justification for selecting XGBoost (96.55%) as the production model.	***6 min***	Sufronia Ganta
4	***Flask Web Application Demo***	Live walkthrough of the Flask web interface — entering meteorological inputs (rainfall, visibility), triggering predictions, and interpreting the flood risk output displayed to the user.	***5 min***	Seethal Somisetty
5	***Multi-Region Monitoring & Use Cases***	Demonstration of real-world scenarios: early warning for a meteorologist, multi-region monitoring by a disaster coordinator, and model validation by a government analyst.	***4 min***	Yasmin Shaik
6	***IBM Cloud Deployment & Conclusion***	Show the deployed application on IBM Cloud. Summarise results, 100% implementation rate, and potential future	***3 min***	Ameena Shaik

		enhancements such as IoT sensor integration and mobile alerts.		

Demo Flow Summary:

Step	***Activity***	***Notes***
1	***Introduction & Problem Statement***	Ameena opens the demo with a brief overview of flood devastation globally and the gap in existing forecasting systems. Sets the context for why an ML-based solution is needed.
2	***Solution Overview***	Yasmin presents the end-to-end solution architecture — from raw weather data ingestion, through preprocessing and model training, to Flask web app deployment on IBM Cloud.
3	***Live Feature Demonstration***	Chetan,Seethal and Sufronia demonstrate core features live: running the trained XGBoost model, entering real values into the Flask app, and showing flood risk predictions for multiple regions.
4	***Q&A and Wrap-Up***	All team members available for questions. Ameena summarises: 6/6 features implemented, 100% demo rate, 96.55% XGBoost accuracy. Future scope briefly mentioned.
